SiteGard® P500

V-Mesh Fencing System

SiteGard

The SiteGard P500 mesh fencing system is ideal as a general purpose perimeter demarcation fence, or for use on construction sites as an alternative to timber hoarding.

SiteGard P500 features welded 2.0m or 2.4m high 4mm single-wire mesh panels with horizontal folds to form an anti-climb fence line that is easy to install. Adjoining panels are held together with metal clips that are then pinned into posts using pre-drilled holes.

SiteGard P500 is an excellent option for low-security applications, including solar farms and large-scale boundary fencing. Additionally, it can be seamlessly integrated with any of the hoarding gates available in the SiteGard collection, resulting in a comprehensive perimeter access and security solution that matches the height requirements.

Applications

- Low security perimeter demarcation
- Solar farms
- Site perimeters

Posts, Clips and Fixings

The posts and clips that Alexandra Security offers provide a fixing system which secures the panels but allows for variations. The system is easy to install and allows the panels to be stepped, helping the fence line to follow the contours of the ground. With the vandal resistant security fixings this post and clip system provides a reasonable level of security to any boundary.
